SUMMARY

CSE '27 student who builds and ships products end to end, from understanding user problems to launch. Go-to-market experience in B2B SaaS, three full-stack products shipped (including an AI-powered email assistant), and leader of a 1,000+ member student tech community.

EDUCATION

Chitkara University, Rajpura, Punjab Aug 2023 – Expected 2027

Bachelor of Engineering, Computer Science Engineering | CGPA: 8.25 / 10

EXPERIENCE

GTM Intern | Recrivio (B2B SaaS) Jul 2026 – Present

- Researched 120+ companies and segmented them by hiring and background-verification needs to define target customer segments for Recrivio's B2B SaaS positioning.
- Built buyer personas and a structured prioritization of prospects, focusing outreach on the highest-fit opportunities.
- Synthesized market research and prospect feedback into actionable recommendations that informed go-to-market strategy.

Project Manager Intern | Medoc Life Dec 2024 – Mar 2025

- Mapped client requirements and operational workflows to identify process gaps, translating findings into structured project deliverables.
- Worked with backend workflows using Postman and internal frameworks to diagnose issues blocking delivery and keep execution on track.

PROJECTS

PayFirst – Voice-First Payment Helper for First-Time UPI Users Nov 2026

- Interviewed first-time UPI users in Tier-3 India and identified fear of payment errors, English-only interfaces and scams as the top blockers; defined the MVP in a PRD.
- Built a web app where users pay by voice in Hindi or Punjabi, with Gemini-powered intent parsing, spoken recipient confirmation and an AI scam checker (React, Node.js, Gemini API).
- Designed a guided practice-payment mode with simulated money, and ran usability tests with real users to iterate on the confirmation flow.

Smart Email Assistant – AI-Powered Product | GitHub 2026

- Identified that professionals lose time writing routine replies in the right tone; defined and built an AI assistant that classifies tone and generates context-aware replies.
- Built tone classification on domain-specific email datasets, plus a prompt-engineering and evaluation pipeline to measure and iteratively improve reply quality.
- Shipped end to end (React, Spring Boot, Hibernate, MySQL, Gemini API) with structured fallback handling so the product stays reliable during API failures.

BorrowBox – Peer-to-Peer Lending Platform | borrowbox-plum.vercel.app 2025

- Saw that students had no trusted way to lend and borrow items on campus; defined the MVP and owned the product lifecycle from requirements to launch on Vercel.
- Built real-time request status updates (WebSockets), secure accounts (JWT) and activity tracking and reporting on a React, Node.js and SQL stack.

LEADERSHIP

Chairperson | IEEE-CIET Student Branch, Chitkara University 2025 – 2026

- Led a 20+ member core team across functions to run 3+ hackathons and 10+ technical and non-technical events reaching 1,000+ students, owning everything from budgeting to execution.
- Analyzed registration, attendance and feedback data across events to track turnout trends and use them to shape planning decisions.

SKILLS

Product: User research, requirement gathering, prioritization, market segmentation, buyer personas, metrics and KPIs, hypothesis testing
AI / ML: Gemini API integration, prompt engineering, LLM output evaluation, tone classification, Claude / AI workflow tools
Data: SQL (MySQL, PostgreSQL), Excel and Google Sheets (pivot tables, formulas)
Engineering: Python, Java, C++, JavaScript, React, Node.js, Express, Spring Boot, AWS, Git, Postman

CERTIFICATIONS

- IBM AI Enterprise Workflow Specialization (incl. Data Analysis & Hypothesis Testing) — IBM, Jul 2026
- AI Fluency Framework & Foundations; Claude 101 — Anthropic, Aug 2026
- DevOps, Cloud, and Agile Foundations Specialization — IBM / Coursera, Jun 2025
